INTERNATIONAL PRELIMINARY EXAMINATION REPORT

(PCT Article 36 and Rule 70)

Applicant's or agent's file reference 65797	FOR FURTHER ACTION See Notification of Transmittal of International Preliminary Examination Report (Form PCT/IPEA/416)	
International application No. PCT/US99/08844	International filing date (day/month/year) 22/04/1999	Priority date (day/month/year) 30/04/1998
International Patent Classification (IPC) or national classification and IPC E21F17/18		
Applicant THE GOVERNMENT OF THE UNITED STATES OF AMERICA		

1. This international preliminary examination report has been prepared by this International Preliminary Examining Authority and is transmitted to the applicant according to Article 36.

2. This REPORT consists of a total of 7 sheets, including this cover sheet.

☐ This report is also accompanied by ANNEXES, i.e. sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT).

These annexes consist of a total of sheets.

3. This report contains indications relating to the following items:

- I ☒ Basis of the report
- II ☐ Priority
- III ☐ Non-establishment of opinion with regard to novelty, inventive step and industrial applicability
- IV ☐ Lack of unity of invention
- V ☒ Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
- VI ☐ Certain documents cited
- VII ☒ Certain defects in the international application
- VIII ☒ Certain observations on the international application

Date of submission of the demand 23/11/1999	Date of completion of this report 17.07.2000
Name and mailing address of the international preliminary examining authority:  European Patent Office D-80298 Munich Tel. +49 89 2399 - 0 Tx: 523656 epmu d Fax: +49 89 2399 - 4465	Authorized officer Mosedale, T Telephone No. +49 89 2399 2286 

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT**

International application No. PCT/US99/08844

I. Basis of the report

1. This report has been drawn on the basis of (*substitute sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to the report since they do not contain amendments.*):

Description, pages:

1-13 as originally filed

Claims, No.:

1-21 as originally filed

Drawings, sheets:

1/7-7/7 as originally filed

2. The amendments have resulted in the cancellation of:

- ☐ the description, pages:
☐ the claims, Nos.:
☐ the drawings, sheets:

3. ☐ This report has been established as if (some of) the amendments had not been made, since they have been considered to go beyond the disclosure as filed (Rule 70.2(c)):

4. Additional observations, if necessary:

**INTERNATIONAL PRELIMINARY
EXAMINATION REPORT**

International application No. PCT/US99/08844

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Yes: Claims 1-21
	No: Claims
Inventive step (IS)	Yes: Claims 1+9+10
	No: Claims 1-8,11-21
Industrial applicability (IA)	Yes: Claims 1-21
	No: Claims

2. Citations and explanations

see separate sheet

VII. Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

see separate sheet

VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

see separate sheet

Section V:

- 1) In the terms of claim 1 US-A-4 581 712 (cited on page 1 of the description) discloses:

an apparatus for monitoring the dynamic loading rate (col.2, l.43-67) on support systems used in an underground mine to withstand abutment pressure (col.1, l.6-13), comprising:

- a **plurality of** load sensing devices 18, **each** adapted to be coupled to one of the support systems 14 (fig.2) used in the underground mine 10;
- a programmable controller 22 for processing support system loading information received from said plurality of load sensing devices (col.5, l.39-59); and
- a sensory indicator 24 controlled by said programmable controller to provide timely warning indications **usable on a real-time basis** (col.4, l.11-17) as an aid in determining when to install additional support systems (col.3, l.46-50) and **to** alert miners of dangerous loading conditions on the support systems during mining operations (col.3, l.51-57).

Thus the subject-matter of claim 1 differs from that known from US-A-4 581 712 by comprising not only one, but a plurality of sensory indicators.

Claim 1 thus formally satisfies the requirement of novelty defined in Article 33(2) PCT, since its subject-matter differs, not only from that of US-A-4 581 712, but also from that of all the remaining available prior art documents.

- 2) In the above evaluation the prior art printer 24 has been equated to one single "sensory indicator", ie. to a readable printed record (to be sensed optically), even though at the moment of printing the printer necessarily also provides an accompanying acoustic indication, sufficient to warn any operator present of the change in loading currently being listed. Whereas neither the readable printed record itself, nor even the noise accompanying the printing process, would correspond to "a sensory **warning**", they are certainly sufficient to count in the terms of claim 1 as at least one "sensory indicator" capable, when consulted, of providing timely warning.

US-A-4 581 712 makes quite clear that the roof pressure monitoring system disclosed is designed to serve as a warning alarm (cf. col.1, l.16-23; col.1,l.65 - col.2,l.2; col.3, l.46-56; col.5,l.60 - col.6,l.7; col.6, l.31-32); in circumstances where the printer-based information might provide insufficient warning, the operator addresses the problem of enhancing the warning function of the known monitoring system.

In this context he is necessarily aware of US-A-3 949 353, where an underground mine surveillance system monitors seismic information and, whenever an unusual event occurs, triggers in real time (col.4, l.35) a printer 72, 84 (col.5, l.25-27), together with an alarm 68 and a visual display 70, 82, 100 (col.4, l.10-13; col.5, l.15-24; col.6, l.56-68).

Thus US-A-3 949 353 teaches that attention can be drawn to real-time events needing human intervention by supplementing the printed log by alarm and visual display means. It thus becomes obvious to include such facilities as may prove necessary under the given circumstances so as to draw extra attention to the printed log of excessive dynamic loading rate foreseen in US-A-4 581 712.

Thus the subject-matter of claim 1 fails to evidence the inventive step required over US-A-4 581 712 under Article 33(3) PCT.

- 2) The preceding considerations apply mutatis mutandis to the independent apparatus claims 12 and 21 and also to method claim 15.

US-A-4 581 712 also discloses all features of dependent claims 2 and 3 (col.2, l.41), and 4 - 8. The feature of dependent claim 11 is readily available from US-A-4 426 642 (ref. 36).

However whereas the feature of dependent claim 9 combined on its own with claim 1 would appear to be obvious in the light of US-A-3 949 353, when starting from US-A-4 581 712, there is no immediate lead to the combined subject-matter of claims 1, 9 and 10, provided that in addition all the constituent features be situated materially proximate to each other, and thus in use also proximate to the respective support system as dedicated monitoring apparatus (cf. current claim 6

and page 3, lines 1 - 14). A claim amended accordingly, so as to include all such features, should prove suited to substantiating the inventive step required under Article 33(3) PCT. Claims 2 - 8 and 11 might then remain as claims appendant to a main claim resulting from such a combination of claims 1, 9 and 10 (Rule 6.4 PCT).

- 3) It is noted that the further apparatus claims 12 and 21 are effectively identical in substance to claim 1 and that preceding objections apply to these claims *mutatis mutandis*; dependent claim 13 corresponds substantially to preceding claim 7 and claim 14 to the combination of preceding dependant claims 10 and 11. In the present case it is therefore considered sufficient, in the light of PCT Guidelines III, 5.1, for there to be only two independent claims, namely a main apparatus claim and an accompanying method claim.

Whilst method claim 15 suffers *mutatis mutandis* from the same lack of inventive step as that established in sections 1 and 2 above for apparatus claim 1, the steps of dependant method claims 16 and 17 are likewise known from the closest prior art of US-A-4 581 712 and the considerations established for claim 9 apply *mutatis mutandis* to claim 18. The feature of method step 19 appears to be obvious in the light of US-A-4 426 642, whilst no particular technical effect can be associated with the welding step of claim 20, where this apparently serves as no more than one of a number of otherwise equivalent mounting techniques.

Section VII:

The reference signs required by Rule 6.2 (b) PCT should be included throughout at least all the apparatus claims. The independent apparatus claim should further, in accordance with Rule 6.3 (b) PCT, be drafted in two-part form relative to the closest available prior art according to US-A-4 581 712. The introductory reference to this prior art should be corrected so as not to suggest that the processing and analysis according to that prior art were not performed in real-time or would not detect dynamic changes in the loading rate.

The introductory portion should also include a consistory clause according to Rule 5.1 (a)(iii) PCT corresponding formally to each independent claim.

It should presumably read "yellow" instead of "red" in line 27 of page 12.

As regards the final paragraph on page 13 in the light of PCT Guidelines III, 4.3a lines 23 - 25 should read " ... skilled in the art **within** the scope of the present invention **as defined by** the appended claims". The final sentence should only refer to the apparatus (device), since the method is claimed in terms specific to use "in an underground mine to withstand abutment pressure" and is thus restricted to such use.

Section VIII:

- 1) The term "dynamic loading rate" employed in the claims fails to define per se the type of monitoring and processing to be performed by the apparatus since, although evocative, "dynamic" fails to indicate specifically in exactly what respect the loading rate concerned is supposed to be dynamic. In order for their definition to be self contained the claims should therefore use the full expression employed on page 3 (lines 22,23), namely "dynamic changing in the loading rate".
- 2) When referring to "is mounted" dependent claim 5 has the form of a method feature by means of which the designation is implicitly change from "monitoring apparatus" to an "underground mine support system comprising monitoring apparatus". This potentially introduces a lack of clarity.

The expression used in claim 6 "an embedded microprocessor having based system" is obscure; should this rather refer to a "dedicated" processor, as mentioned on page 5 (line 14) ? It is also noted, for good measure, that in claim 12 the expression "means for installing at least one load sensing device" is such as not to include the substance of the load sensing device itself.

PCT

INTERNATIONAL SEARCH REPORT

(PCT Article 18 and Rules 43 and 44)

Applicant's or agent's file reference 65797	FOR FURTHER ACTION see Notification of Transmittal of International Search Report (Form PCT/ISA/220) as well as, where applicable, item 5 below.	
International application No. PCT/US 99/ 08844	International filing date (day/month/year) 22/04/1999	(Earliest) Priority Date (day/month/year) 30/04/1998

Applicant

THE GOVERNMENT OF THE UNITED STATES OF AMERICA

This International Search Report has been prepared by this International Searching Authority and is transmitted to the applicant according to Article 18. A copy is being transmitted to the International Bureau.

This International Search Report consists of a total of 3 sheets.

It is also accompanied by a copy of each prior art document cited in this report.

1. Basis of the report

- a. With regard to the **language**, the international search was carried out on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.

the international search was carried out on the basis of a translation of the international application furnished to this Authority (Rule 23.1(b)).

- b. With regard to any **nucleotide and/or amino acid sequence** disclosed in the international application, the international search was carried out on the basis of the sequence listing :

contained in the international application in written form.

filed together with the international application in computer readable form.

furnished subsequently to this Authority in written form.

furnished subsequently to this Authority in computer readable form.

the statement that the subsequently furnished written sequence listing does not go beyond the disclosure in the international application as filed has been furnished.

the statement that the information recorded in computer readable form is identical to the written sequence listing has been furnished

2. ☐ **Certain claims were found unsearchable** (See Box I).

3. ☐ **Unity of invention is lacking** (see Box II).

4. With regard to the **title**,

the text is approved as submitted by the applicant.

the text has been established by this Authority to read as follows:

5. With regard to the **abstract**,

the text is approved as submitted by the applicant.

the text has been established, according to Rule 38.2(b), by this Authority as it appears in Box III. The applicant may, within one month from the date of mailing of this international search report, submit comments to this Authority.

6. The figure of the **drawings** to be published with the abstract is Figure No.

as suggested by the applicant.

because the applicant failed to suggest a figure.

because this figure better characterizes the invention.

1

None of the figures.
